Warehouse

A7/10km

Connection

1.800sqm

Office and social areas

4.500sqm

Mezzanine

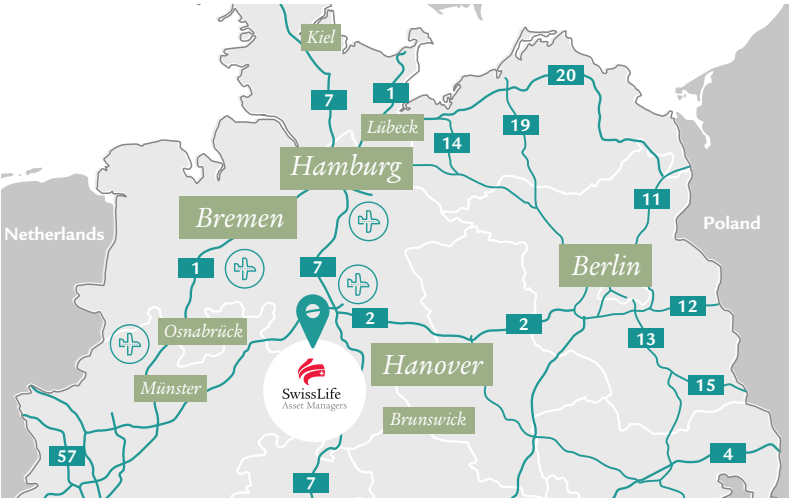

Location and surroundings

Macro location

The Hanover logistics region enjoys good connections to the German motorway network, in particular via the A7 and A2. This means that the industrial sector can be reached from both north-south and east-west directions. Hanover is also a central grouping location for container traffic from the North Sea ports, therefore meaning goods can be

efficiently distributed throughout Germany. In order to fulfil this function, the region has efficient multimodal infrastructure for container handling, in particular the Nordhafen in Hanover and the freight transport centre (GVZ) in Lehrte. Other options for multimodal container handling are also available.

Macro location

Distances

	Motorway A7	approx. 10 km
	Container Terminal Hannover	approx. 50 km
	GVZ Hannover-Lehrte	approx. 20 km
	Hannover-Langenhagen cargo airport	approx. 40 km

Micro location

The site is located in a small but established industrial area with local and medium-sized companies (metal construction etc.) as well as a large company from the food industry. In addition, it is right next to the L214 highway, which runs for 10 km to the A7 motorway in a westerly direction, thus

linking the site with major national locations such as the airport and Hanover city centre, which is less than 50 km away. Wietze, which has more than 8600 inhabitants, has good infrastructure, while the neighbouring town of Celle can also be reached in about 20 minutes.

«Thanks to its high sustainability standards and flexible use concept, this property offers the ideal concept for a wide range of individual customer needs.»

Ingo Steves, Managing Partner Logistics at Swiss Life Asset Managers

Location and surroundings

Hanover is located at the intersection of major north-south (A7) and east-west (A2) connections and offers the possibility to use all four modes of transport. It is connected to the North Sea ports by road, rail and inland waterway. The logistics region comprises the greater Hanover area as well as the neighbouring cities of Salzgitter, Braunschweig and Wolfsburg to the east. The automotive industry as well as the wholesale and retail trade benefit from the location: in addition to supplying its own metropolitan area,

its central location in the northern half of Germany and its proximity to the ports of Hamburg and Bremen, including Bremerhaven, make the region a natural location for a grouping and distribution centre for hinterland transport. “European Gateways” are transport hubs with European significance. Hanover assumes a similar grouping and distribution function for the German seaports in the hinterland, as is the case in Duisburg for the ARA ports.

Location in Germany and Europe

Property description

Logistics space with high ESG standards and special design

A state-of-the-art logistics property with more than 44 000 square metres of rental space is being built on a 77 000 square metre greenfield site in the Hanover region, in Wietze. The warehouse area of almost 38 000 square metres is divided into four halls with a total of eight fire-protection sliding steel doors and 40 transfer gates. The property also has four ground-level driveways. The clear hall height is 12.20 metres and the floor load capacity is 5 t/m².

The mezzanine area spans 4500 square metres, with 1800 square metres of office and social space planned. In addition to e-charging stations for cars and bicycles, there are a number of benches in the green area for employees to use. We are aiming to achieve BREEAM “Very Good” certification. In addition to the photovoltaic systems on the roof and the heat pumps, generous drainage areas, green-landscaped facades and flower meadows are planned for this purpose. The property is rounded off by its attractive design featuring wooden trusses, generous window fronts and vibrant petrol colours.

«This impressive location, with its strategic position in the metropolitan region of Lower Saxony, boasts excellent connections to the surrounding large cities and their metropolitan areas.»

Alexander Schmid, Head Development Logistics at Swiss Life Asset Managers
